GENOVA BY CUSTAR

Paystack set-up and payment plans

How parents pay on the website, what is already configured, and what you still need to do. Prepared 15 October 2026.

1. How payments work

- Parents pay **only on the website** (www.custar.ng/Genova). The app shows no prices and no purchase buttons.
- The parent picks a plan, ticks the privacy-policy consent, and is sent to Paystack's secure payment page. Card details never touch Genova.
- Paystack charges the **amount set on the Paystack plan**, then repeats the charge every month or quarter.
- Paystack tells Genova about each payment through a **webhook**. Genova then turns Premium on, keeps it on while payments continue, and sends the receipt and reminder emails.
- Parents manage or cancel their subscription from the Account page on the website. A cancelled plan keeps Premium until the end of the paid period.

2. Payment plans

Genova plan	Price	Paystack interval	Paystack plan code
Free	₦0	none (no payment)	none
Premium Monthly	₦3,000 every month	Monthly	`PLN_l1pv5yvp8t3goub`
Premium Quarterly	₦7,500 every 3 months (saves 17%)	Quarterly	`PLN_5rpvsuh1azkeqso`

Done: both plan codes are saved in the live Genova database (table `plans`), so checkout already uses them.

Check the amounts in Paystack. Open each plan in the Paystack dashboard and confirm Monthly says ₦3,000 and Quarterly says ₦7,500. Paystack charges whatever amount the plan holds. The older prices (₦5,000 and ₦12,000) must not be on these plans.

Access rules (set in the database)

Situation	What the parent gets
Paid and up to date	Premium
Payment late	Premium kept for 5 days after the due date, then back to Free
Cancelled	Premium until the end of the period already paid

3. Paystack dashboard set-up

3.1 Create the plans (done)

1. Paystack dashboard, **Plans**, **Create Plan**.
2. Name *Genova Premium Monthly*, amount **₦3,000**, interval **Monthly**. Leave the invoice limit blank so it renews until cancelled.
3. Name *Genova Premium Quarterly*, amount **₦7,500**, interval **Quarterly**. Same settings.
4. Copy each plan's code (starts with `PLN_`). These are the codes in section 2.

3.2 Webhook

1. Paystack dashboard, **Settings**, **API Keys & Webhooks**.
2. Set the **Webhook URL** (use the same URL in Test and Live mode) to:
   `https://cjdrlddvbyfataumdztg.supabase.co/functions/v1/paystack-webhook`
3. Save. This URL must point at the Genova Supabase function, not at another website.

Genova checks the signature on every webhook with your secret key, so anyone posting to that URL without Paystack's signature is ignored.

3.3 API keys

On the same page copy the **Secret Key** (starts with `sk_test_` or `sk_live_`). Never put it in the website, the app or a document. It goes only into Supabase (next section).

4. Supabase configuration

Open the Supabase project **GenovaStorybook**, **Edge Functions**, **Secrets**, and add:

Secret name	Value	Status
`PAYSTACK_SECRET_KEY`	Your Paystack secret key. Use the **test** key while testing, then the **live** key. It must be from the same mode as the plans.	**To do**
`WEB_URL`	`https://www.custar.ng/Genova` (where Paystack sends the parent back after paying, and the base of the email links)	**To do**
`SUPPORT_EMAIL`	Optional. The address shown in receipts, for example your support inbox.	Optional
`PAYSTACK_PLAN_MONTHLY` `PAYSTACK_PLAN_QUARTERLY`	Not needed. The plan codes are already in the database. These secrets are only a backup.	**Not needed**

> **Security:** a Paystack secret key was pasted into a chat earlier. In Paystack, regenerate the key and enter only the *new* value in Supabase.

Auth settings (Supabase, Authentication): set **Site URL** to `https://www.custar.ng/Genova` and add `https://www.custar.ng/Genova/**` to the redirect URLs. Set up custom email sending (Resend) so parents can create accounts reliably.

5. Test before going live

1. Use Paystack **Test mode**: test secret key in Supabase, and test-mode copies of both plans (test and live plans have different codes).
2. On the website create a parent account, open **Plans**, choose Premium Monthly, tick the consent and continue to Paystack.
3. Pay with a test card from Paystack's documentation (https://paystack.com/docs/payments/test-payments).
4. You return to the Account page. It should show the **Premium badge** and the renewal date. Open the app signed in to the same account: the premium stories are unlocked.
5. In Supabase, table `payment_events` should contain the webhook events. This confirms Paystack's data matches what Genova expects.
6. Check that the receipt email arrives (needs email activated in the admin).
7. Try **Manage subscription** and cancel. Premium should stay until the end of the paid period.

- [ ] Plan amounts are ₦3,000 and ₦7,500 in Paystack
- [ ] Webhook URL saved in Paystack
- [ ] `PAYSTACK_SECRET_KEY` and `WEB_URL` set in Supabase
- [ ] Test payment shows the Premium badge
- [ ] `payment_events` has rows
- [ ] Receipt email arrives

6. Going live

1. Complete Paystack's business verification so live payments are enabled.
2. Create the same two plans in **Live** mode (₦3,000 monthly, ₦7,500 quarterly). The live plans have new `PLN_` codes. Send them to be saved in the database.
3. Replace the Supabase secret `PAYSTACK_SECRET_KEY` with the **live** secret key.
4. Check the webhook URL is set under Live mode too.
5. Make one real small payment and cancel it, to confirm the full cycle.

Changing a price later: edit the plan in Paystack (it offers to update existing subscribers or not) and change the price in the Genova `plans` table so the website shows the same amount.

7. If something goes wrong

What you see	Likely cause and fix
"Payments for this plan are not set up yet"	The plan has no Paystack code. Codes are saved for both plans, so check the plan is marked active.
"Could not start checkout" or a Paystack error	Secret key missing, wrong mode (test key with live plan, or the reverse), or the plan code does not exist in that mode.
Parent paid but is not Premium	Webhook not reaching Genova. Check the webhook URL, then Paystack's webhook log and the `payment_events` table.
Wrong amount charged	The amount on the Paystack plan is wrong. Fix it in Paystack.
Parent returned to the wrong site	`WEB_URL` is missing or wrong.

8. Status summary

Item	Status
Plans created in Paystack, codes saved in Genova	**Done**
Checkout, webhook, manage-subscription functions deployed	**Done**
Paystack plan amounts confirmed (₦3,000 / ₦7,500)	**You: check**
Webhook URL saved in Paystack	**You: do**
Supabase secrets `PAYSTACK_SECRET_KEY`, `WEB_URL`	**You: do**
Test payment end to end	**Not yet run (this has never been tested against the real Paystack)**
Live plans and live key	**After testing**
